Hybrid

// HYBRID PROTOCOL //

The 1st Dual Governance, Deflationary, and Yield Generation System with Hourly Automated Buyback Mechanism.

Hybrid is a dual governance system with major focus on sustainability.

Sustainability is achieved via different mechanisms that combine to create a balanced network.
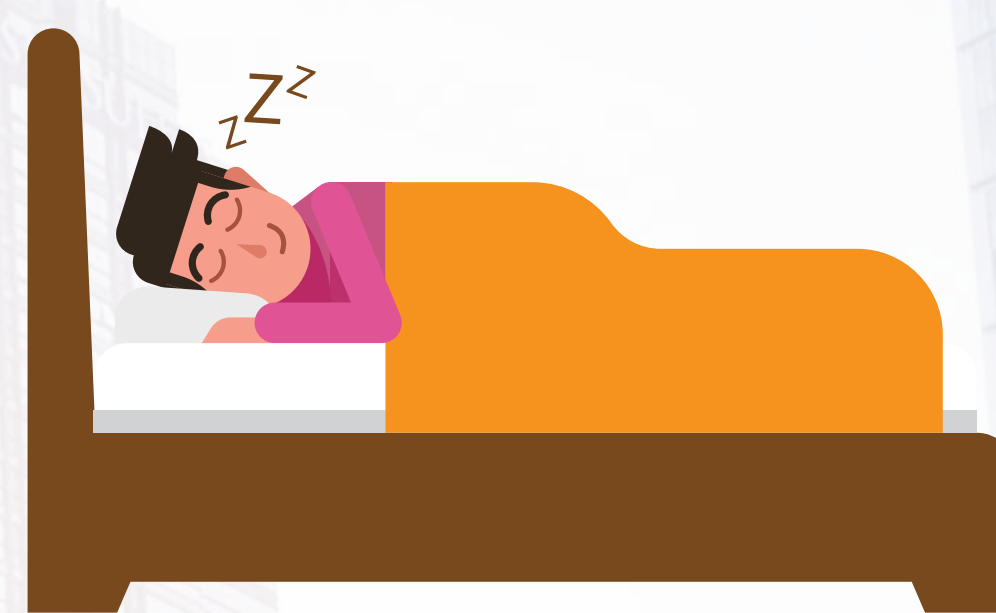

// COMPOUNDING LIQUIDITY //

Increasing liquidity provision from 1% of fees provides continuous support for readily tradability of the network tokens. More liquidity equates more possibility for growth and network usage and activities.

$100,000 daily volume means $1000 goes to support the liquidity every day. What if this is $200k, $500k, or $1 in daily trading volume.

// DUAL GOVERNANCE APPROACH //

To better establish a smooth governance system without adding much complex account requirements and holding duration. HIP will be used together with BRID to oversee governance.

HIP will function as the parameter for making proposals. BRID will represent the vote weight of an account and be used to cast a vote.
The process of BRID generation will be revealed before the governance dashboard is released.

// EARN EVEN WHILE YOU SLEEP //

Hybrid is created to allow frictionless yield generation of assets. DeFi interactions do not always need to be stressful. Hybrid creates a yield generation funnel where even a day newbie can increase their token balance with just holding the asset.

Frictionless yield generation at its simplest. 1% in fees is automatically distributed to all token holders according to their proportion of wallet balance.

// AUTOMATED BUYBACKS ENSURE CONTINUOUS BUYING PRESSURE //

Every hour 0.5% from fees automatically buy HIP from the market at the current market price. This supports the price level of the token and increases buying pressure. Purchased tokens via this means are forever burnt and removed from the supply, creating a deflationary model in the process.

01 *Increasing liquidity*
02 *Automated buybacks*
**03** *Frictionless yield generation*

All of these combine to create a truly decentralized and sustainable system.

Plug into the era of effortless yield-farming and improve your contributions to the DeFi notion via a profitable and rewarding endeavor with Hybrid Protocol.

// TOKENOMICS //

HIP will have a total and max supply of 25,000 tokens

1,250 or 5% - For team
1,250 or 5% - For marketing
15,000 or 60% - For sale
7,500 or 30% - For Uniswap liquidity.

// SALES DETAIL //

PRESALE
1 ETH = 120 HIP
LISTING
1 ETH = 105

Soft cap = 80 ETH
Harcap = 120 ETH

Hybrid sale will launch with a fair distribution model.
Only whitelisted users will be eligible to participate.
2 pool will be available for whitelisting
First pool = 40 users with 2 ETH contributions
Second pool = 40 users with 1 ETH distribution.
